EOD001002 Directional screen for 6 inch light stick (15cm)

Function: The directional khaki screen is designed to accommodate a 6 inch lightstick (15cm) and control the amount of light given off by the stick. When the lightstick has been activated and inserted into the directional case, its rotary window allows the level of light given off to be adjusted. The case can also be attached to any type of support by means of the three attaching systems and its attaching tab.

Made of very tough plastic, the directional case forms a screen controlling the visible light during tactical operations. This simple tactical equipment can be used, among other things, for marking a route in a single direction

Construction: Plastic

Mass: 0.031kg

Dimensions: 170 x 23mm

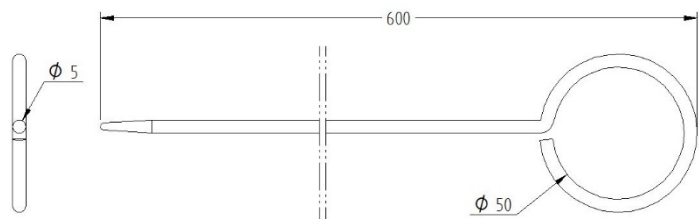

EOD001004 Mine Marking Ground Stake

Function: Ground stake, to attach mine marking flag.

Construction: Stainless Steel

Mass: 0.111kg
